

H.Geometry – Chapter 2 – Definition Sheet

Section 2.6

Pairs of Coplanar Lines					
Definitions of: <u>Transversal</u>	<ul style="list-style-type: none"> -A line that intersects 2 other lines -Forms <u>8</u> angles with special names 				
<u>Corresponding Angles</u>	<ul style="list-style-type: none"> -Angles in same position with respect to the intersection. <p>Points Examples:</p> <table style="margin-left: 20px;"> <tr> <td>$\angle 3$ and $\angle 5$</td> <td>$\angle 4$ and $\angle 6$</td> </tr> <tr> <td>$\angle 1$ and $\angle 7$</td> <td>$\angle 2$ and $\angle 8$</td> </tr> </table> 	$\angle 3$ and $\angle 5$	$\angle 4$ and $\angle 6$	$\angle 1$ and $\angle 7$	$\angle 2$ and $\angle 8$
$\angle 3$ and $\angle 5$	$\angle 4$ and $\angle 6$				
$\angle 1$ and $\angle 7$	$\angle 2$ and $\angle 8$				
<u>Alternate Interior Angles (AIA)</u>	<ul style="list-style-type: none"> -Interior angles on opposite sides of the transversal. <p>Examples:</p> <table style="margin-left: 20px;"> <tr> <td>$\angle 2$ and $\angle 5$</td> </tr> <tr> <td>$\angle 1$ and $\angle 6$</td> </tr> </table>	$\angle 2$ and $\angle 5$	$\angle 1$ and $\angle 6$		
$\angle 2$ and $\angle 5$					
$\angle 1$ and $\angle 6$					
<u>Alternate Exterior Angles (AEA)</u>	<ul style="list-style-type: none"> -Exterior angles on opposite sides of the transversal. <p>Examples:</p> <table style="margin-left: 20px;"> <tr> <td>$\angle 2$ and $\angle 7$</td> </tr> <tr> <td>$\angle 3$ and $\angle 8$</td> </tr> </table>	$\angle 2$ and $\angle 7$	$\angle 3$ and $\angle 8$		
$\angle 2$ and $\angle 7$					
$\angle 3$ and $\angle 8$					
<u>Same-side Interior Angles (SSIA)</u>	<ul style="list-style-type: none"> -Interior angles on the same side of the transversal. <p>Examples:</p> <table style="margin-left: 20px;"> <tr> <td>$\angle 1$ and $\angle 5$</td> </tr> <tr> <td>$\angle 2$ and $\angle 6$</td> </tr> </table>	$\angle 1$ and $\angle 5$	$\angle 2$ and $\angle 6$		
$\angle 1$ and $\angle 5$					
$\angle 2$ and $\angle 6$					
<u>Same-side Exterior Angles (SSEA)</u>	<ul style="list-style-type: none"> -Exterior angles on the same side of the transversal. <p>Example:</p> <table style="margin-left: 20px;"> <tr> <td>$\angle 3$ and $\angle 7$</td> </tr> <tr> <td>$\angle 4$ and $\angle 8$</td> </tr> </table>	$\angle 3$ and $\angle 7$	$\angle 4$ and $\angle 8$		
$\angle 3$ and $\angle 7$					
$\angle 4$ and $\angle 8$					

H.Geometry – Chapter 2 – Definition Sheet

Parallel Lines Conjectures	
<u>Corresponding Angles Postulate</u> (CPA Postulate)	<p>-If parallel lines are cut by a transversal, then the corresponding angles are <u>congruent</u>.</p> <p>Examples: $\angle 1$ and $\angle 5$ $\angle 3$ and $\angle 7$ $\angle 2$ and $\angle 6$ $\angle 4$ and $\angle 8$</p> 
<u>Alternate Interior Angles Theorem</u> (AIA theorem)	<p>-If parallel lines are cut by a transversal, then the alternate interior angles are <u>congruent</u>.</p> <p>Examples: $\angle 3$ and $\angle 6$ $\angle 4$ and $\angle 5$</p>
<u>Alternate Exterior Angles Theorem</u> (AEA theorem)	<p>-If parallel lines are cut by a transversal, then the alternate exterior angles are <u>congruent</u>.</p> <p>Examples: $\angle 2$ and $\angle 7$ $\angle 4$ and $\angle 8$</p>
<u>Same-Side Interior Angles Theorem</u> (SSIA theorem)	<p>-If parallel lines are cut by a transversal, then the same side interior angles are <u>supplementary</u>.</p> <p>Examples: $\angle 3$ and $\angle 5$ $\angle 4$ and $\angle 6$</p>
<u>Same-Side Exterior Angles Theorem</u> (SSEA theorem)	<p>-If parallel lines are cut by a transversal, then the same side exterior angles are <u>supplementary</u>.</p> <p>Examples: $\angle 2$ and $\angle 8$ $\angle 1$ and $\angle 7$</p>
	When two lines are cut by a transversal:
Corresponding Angles Converse Postulate	-If the corresponding angles are <u>\cong</u> , then the lines are <u>\parallel</u> .
AIA Converse Theorem	-If the alternate interior angles are <u>\cong</u> , then the lines are <u>\parallel</u> .
AEA Converse Theorem	-If the alternate exterior angles are <u>\cong</u> , then the lines are <u>\parallel</u> .
SSIA Converse Theorem	-If the same side interior angles are <u>Supp</u> , then the lines are <u>\parallel</u> .
SSEA Converse Theorem	-If the same side exterior angles are <u>Supp</u> , then the lines are <u>\parallel</u> .
