

H. Geometry - Chapter 3 - Definition Sheet

Section 3.1

<p>Measurement Tools</p>	<p>- Ruler (inches, cm.) - protractor (angles)</p>
<p>Construction Tools</p>	<p>- compass - straightedge (unmarked)</p>
<p>Sketch</p>	<p>- Freehand ; no drawing tools used</p>
<p>Draw</p>	<p>- use <u>measurement</u> tools ; more accurate</p>
<p>Construct</p>	<p>- use construction tools ; very precise picture - no measuring allowed ; don't erase construction marks</p>
<p>Constructing the Duplicate of a Segment</p>	<ol style="list-style-type: none"> 1.) Start with a given segment. 2.) Draw using straightedge 3.) use compass to measure out \overline{AB} 

H. Geometry – Chapter 3 – Definition Sheet

Constructing the Duplicate of an angle

- 1.) Start with a given angle.
with straightedge, draw ray for one side
- 2.) Use compass to draw arc from point hitting two edges of angle
- 3.) On new ray, draw the same arc, measure where arc hits the side and do the same to the new ray.

Constructing an equilateral triangle

- (1) Draw a line segment w/a straightedge
- (2) Measure out the length with the compass.
- (3) From both ends of the segment, draw the arcs.
- (4) Where they intersect, is your third point of your Δ .
