

H. Geometry - Chapter 5 - Definition Sheet

Section 5.3 (Day 1)

Recall:
Definition of a Trapezoid

A quadrilateral with at least one pair of parallel sides

bases - 2 parallel sides $\overline{JK}, \overline{ML}$

legs - 2 non-parallel sides $\overline{JM}, \overline{KL}$

base angles - angles at both ends of the base $\angle M$ and $\angle L$
 $\angle J$ and $\angle K$

consecutive angles between bases - angles at both ends of a leg
 $\angle J$ and $\angle M$
 $\angle K$ and $\angle L$

INVESTIGATION PROOF:

GIVEN: Trapezoid TRAP w/bases
 \overline{TR} and \overline{AP}

PROVE: $\angle T$ and $\angle P$ are suppl.

CONCLUSIONS

0. TRAPEZOID TRAP WITH
BASES \overline{TR} AND \overline{AP}
- $\overline{TR} \parallel \overline{PA}$
 - $\angle T$ and $\angle P$ are suppl.

JUSTIFICATIONS

0. GIVEN
- Defn. of trapezoid
 - SSIA Theorem.

H. Geometry - Chapter 5 - Definition Sheet

Recall:
Definition of Isosceles Trapezoid

A trapezoid with two congruent legs

CONSTRUCT: Isosceles Trapezoid (what can you conclude?)

measure base angles

- base angles are congruent

Isosceles Trapezoid
Theorem

Both sets of base angles in an isosceles trapezoid are

congruent. $\angle D \cong \angle E$
 $\angle G \cong \angle F$

H. Geometry – Chapter 5 – Definition Sheet

GIVEN : ISOSCELES TRAPEZOID
 $WXYZ$ WITH
 BASES \overline{WX} AND \overline{YZ}

PROVE : $\overline{WY} \cong \overline{XZ}$

CONCLUSIONS

JUSTIFICATIONS

0. Isosceles Trapezoid $WXYZ$ with Bases \overline{WX} & \overline{YZ}
1. $\overline{WZ} \cong \overline{XY}$
2. $\angle WZY \cong \angle XYZ$
3. $\overline{ZY} \cong \overline{ZY}$
4. $\triangle WZY \cong \triangle XYZ$
5. $\overline{WY} \cong \overline{XZ}$

0. Given
1. Defn. of ^{Isosceles} Trapezoid
2. Isosceles Trapezoid Theorem
3. Reflexive
4. SAS \cong
5. CPCTC

Isosceles Trapezoid
Diagonals
 Theorem

The diagonals of an isosceles trapezoid are congruent
